

Computer Security and Cyber Law

Unit 11

Issues with Internet in College

Lecturer: Binod Chandra Shrestha

Topics to be discussed

- ▶ Cyberbullying: Curbing student use of technology to intimidate and harass others;
 - ▶ Student use of the Internet: Reducing inappropriate Internet behaviors;
 - ▶ Staff use of the Internet: Drawing a Line between teachers' public and private lives;
 - ▶ Privacy and security: Protecting student information;
 - ▶ The school as an Internet service provider: Providing access and protecting students;
 - ▶ Copyright law in the classroom: steering clear of legal liability;
 - ▶ Policies, procedures and contracts: communicating expectations to teachers, students and parents;
 - ▶ Ethical Issues: Developing responsible internet citizens
- 

Cyberbullying

- ▶ "Cyberbullying" is when a child, preteen or teen is tormented, threatened, harassed, humiliated, embarrassed or otherwise targeted by another child, preteen or teen using the Internet, interactive and digital technologies or mobile phones.
 - ▶ It has to have a minor on both sides, or at least have been instigated by a minor against another minor.
 - ▶ Once adults become involved, it is plain and simple cyber-harassment or cyberstalking.
 - ▶ Adult cyber-harassment or cyberstalking is never called cyberbullying.
- 

Curbing student use of technology to intimidate and harass others

- ▶ For as long as there have been schools, there have been bullies. Students know it. Teachers know it too. There are physical bullies, verbal bullies, and relational bullies (i.e., bullies who use their status to exclude others from social groups and activities). Bullies are aggressive and intimidating, and their behavior can have a devastating effect on their victims, both at school and at home.
 - ▶ Bullying poses a problem for schools because of the toll it takes on members of the school community and the school environment in general. As a result, many schools have enacted antibullying policies that allow them to take disciplinary action against bullies when bullies are caught in the act of harassing, taunting, or harming their peers. As the scenarios above indicate, bullying has changed markedly with the development of electronic media. In the case of the Vermont teen, it even prompted lawmakers to propose a law requiring school antibullying policies. This new form of bullying is called **cyberbullying**.
- 

- ▶ Cyberbullying differs from traditional, face-to-face bullying. It relies on electronic devices, the Internet, and the anonymity the Internet provides. Nearly all cyberbullies operate anonymously, hiding behind screen names or stolen identities. They can access their victims at any hour of the day, and they can reach much larger audiences electronically when spreading rumors and falsehoods.
- ▶ Cyberbullies have a multitude of tools available to them: cell phones, camera phones, e-mail, instant messaging, personal Web sites, **socialnetworking sites, and more. They bully their victims via text messages**, postings on social-networking sites like Facebook and MySpace (or the more vitriolic Snubster, EnemyBook, Juicy Campus, and HateBook), and discussions in online chat rooms. They forward e-mail messages to huge groups of friends and post embarrassing, sometimes altered, photographs and video clips of their victims to the Internet. In some instances, students hack into other students' e-mail accounts or social-networking sites and create havoc by sending hateful messages or posting inflammatory content that appears to have been authored by their victims. The victims are not always fellow students. Sometimes the victims are teachers.

Common Forms of Cyberbullying

- ▶ *Flaming is online fights using electronic messages with angry and vulgar language.*
 - ▶ *Harassment is repeatedly sending nasty, mean, and insulting messages.*
 - ▶ *Denigration is dissing someone online, sending or posting gossip or rumors about a person to damage his or her reputation or friendships.*
 - ▶ *Impersonation is pretending to be someone else and sending or posting material to get that person in trouble or danger or damage that person's reputation or friendships.*
 - ▶ *Outing is sharing someone's secrets or embarrassing information or images online.*
 - ▶ *Trickery is tricking someone into revealing secrets or embarrassing information, then sharing it online.*
 - ▶ *Exclusion is intentionally and cruelly excluding someone from an online group.*
 - ▶ *Cyberstalking is repeated, intense harassment and denigration that includes threats or creates significant fear.*
- 

Student use of the Internet:

Reducing inappropriate Internet behaviors

- ▶ Educating the kids about the consequences (losing their ISP or IM accounts) helps. Teaching them to respect others and to take a stand against bullying of all kinds helps too.
- ▶ Because their motives differ, the solutions and responses to each type of cyberbullying incident has to differ too. Unfortunately, there is no "one size fits all" when cyberbullying is concerned. Only two of the types of cyberbullies have something in common with the traditional schoolyard bully. Experts who understand schoolyard bullying often misunderstand cyberbullying, thinking it is just another method of bullying. But the motives and the nature of cybercommunications, as well as the demographic and profile of a cyberbully differ from their offline counterpart.
- ▶ When schools try and get involved by disciplining the student for cyberbullying actions that took place off-campus and outside of school hours, they are often sued for exceeding their authority and violating the student's free speech right.

Staff use of the Internet: Drawing a Line between teachers' public and private lives

- ▶ Online behavior of one reflects his or her standards of honesty, respect, and consideration as that in face to face.
 - ▶ The lines between public and private, personal and professional are blurred in the digital world. By virtue of identifying himself or herself as teacher/staff of a school/college online, he/she is now connected to colleagues, students, parents and the school/college community. He/she should ensure that content associated with him/her is consistent with his work and professional ethics.
 - ▶ It is his/her responsibility to familiarize himself/herself with appropriate settings on social media that he/she use to ensure that only the intended audiences get his/her activities on that social media.
 - ▶ Electronic communication with students are to be sent simultaneously to multiple students, not to just a single student, except communication is clearly school related and inappropriate for persons other than the individual student to receive.
 - ▶ Social media can be a powerful communication tool and educational tool for students and parents. The school should encourage to use social media for those purpose.
 - ▶ The teacher is personally responsible for the content he/she publish online. He/she should take care the hi/her privacy.
 - ▶ Teachers who use social networking to interact with students/parents as an educational/communication tool must find a way to interact without giving access to their personal information and posts to them.
 - ▶ Teachers need not to post confidential student information while contributing online.
- 

Privacy and security: Protecting student information

- ▶ Any organization with electronic records is vulnerable to security breaches, and education agencies are no exception.
- ▶ Use password to protect from data breach.
- ▶ The Data Destruction Document is a best practices guide on properly destroying sensitive student data after it is no longer needed.
- ▶ Data Security checklist is designed to assist stakeholder organizations with developing and maintaining a successful data security program by listing essential components that should be considered when building such a program, with focus on solutions and procedures relevant for supporting data security operations of educational agencies.
- ▶ Data breach response checklist publication provides educational agencies and institutions with a checklist of critical breach response components and steps to assist stakeholder organizations in building a comprehensive data breach response capability. The checklist is meant to be used as a general example illustrating some current industry best practices in data breach response and mitigation applicable to education community.
- ▶ Schools have long been targets for cyber thieves and criminals. A new threat, where the criminals are seeking to extort money from school districts and other educational institutions on the threat of releasing sensitive data from student records. In some cases, this has included threats of violence, shaming, or bullying the children unless payment is received.

The school as an Internet service provider: Providing access and protecting students

- ▶ *Internet Service Provider* refers to a company that provides Internet services, including personal and business access to the Internet.
- ▶ For a monthly fee, the service provider usually provides a software package, username, password and access phone number.
- ▶ Equipped with a modem, you can then log on to the Internet and browse the World Wide Web and USENET, and send and receive e-mail.
- ▶ For broadband access you typically receive the broadband modem hardware or pay a monthly fee for this equipment that is added to your ISP account billing.
- ▶ In addition to serving individuals, ISPs also serve large companies, providing a direct connection from the company's networks to the Internet.
- ▶ ISPs themselves are connected to one another through Network Access Points (NAPs).
- ▶ ISPs may also be called IAPs (Internet Access Providers).

Copyright law in the classroom: steering clear of legal liability

- ▶ Generally, it occurs when someone copies/steals expressions from another friend's composition and makes them appear to be his own work.
 - ▶ It is like plagiarism.
 - ▶ Teacher/examiner recognize acts of plagiarism as violations of Copyright law
 - ▶ It is difficult to identify who has copied i.e. violation of copyright law in classroom.
- 

Policies, procedures and contracts: communicating expectations to teachers, students and parents

- ▶ School or college has own policy use ICT in its premises.
 - ▶ School or college shall develop standard operating procedure for ICT in its premises as well as communication and information sharing between teacher and students or teachers and parents.
 - ▶ A contract is an agreement that is enforceable.
 - ▶ There shall be contracts between School or college and teachers/students/parents to use ICT.
- 

Ethical Issues: Developing responsible internet citizens

- ▶ Teachers, administrators and students should receive instruction related to the safe and responsible use of the Internet. Education for students should be appropriate to their age and understandings. Young people should be empowered to independently handle a wide range of interactions and activities on the Internet that could be harmful to their safety and well being. Educating older students regarding how to avoid the inadvertent access of inappropriate material and appropriate, effective responses if they accidentally access such materials, especially if the site has "trapped" them and will not allow them to exit, is essential. Further, it is necessary to address why such materials are considered to be inappropriate. Additional safety concerns include being the target or recipient of sexual predation, hate group recruitment, invasion of personal privacy, Internet fraud and scams, harassment, stalking, and harmful speech.
- ▶ We also must address other issues related to the responsible use of the Internet by young people. In addition to the intentional access of potentially harmful material, these issues include copyright infringement, plagiarism, computer security violations (hacking, spreading viruses), violation of privacy, Internet fraud and scams, harassment, stalking, and dissemination of harmful speech or other violent or abusive material. We must prepare young people to understand their responsibilities as Cybercitizens.

Core Components of Safe and Responsible Use of the Internet in School

- ▶ Focus on the Educational Purpose
 - ▶ Clear Policy that is Well-Communicated to Students
 - ▶ Safe Internet Places for Younger Students
 - ▶ Education About the Safe and Responsible Use
 - ▶ Supervision and Monitoring
 - ▶ Appropriate Discipline
-
